Time Test Start	12:06
Transducer Reading at test start	11.850 FT
Time of Pressurization	12:07
Time of Equilibrium	13:47
Equilibrium Transducer Reading	11.346 FT
Time of Pressure Release	13:47
Time Test Stop	14:29

NOTES:

** Static water level is 5.00' b/g. Depth to water used to calculate transducer depth was measured during a falling head period after displacement resulting from transducer installation. Due to time constraints and slow response time of this well, pressurization was administered before static water level had been re-established. However, achievement of equilibrium water levels after pressurization and depressurization of well head was determined based on static water level of 5.00' b/g.
At 13:31, accidental adjustment of air flow regulator resulted in slight depressurization of well head. This adustment was immediately corrected.
Due to time constraints, only one pneumatic slug test was administered at this well.

NOTES:

Due to the minimal extent of the water column above the screen in this well, the well was pressurized to drive the water column to the midpoint of the screen (8.5 ft b/g)

Note that DTS for this test is the midpoint of the well screen.

Results of this test will be compared with sustained yield test (administered with a peristaltic pump) results for this well.

NOTES: Due to high communication between the IN ZONE and BELOW ZONE at this test interval, results for this packer test may not be valid. Three additional attempts (at depth intervals 174-184 ft, 176-186 ft, and 177-187 ft) were made to eliminate this communication. However, all three additional intervals showed the same excess communication between the IN ZONE and BELOW ZONE.

	A - TOTAL LENGTH OF TEST SECTION (FT)	=	9.7	FT
	TP - TOTAL LENGTH OF TOP PACKER AND ASSEMBLY	=	15.7	FT
	BP - TOTAL LENGTH OF BOTTOM PACKER AND ASSEMBLY	=	4.65	FT
	D - DISTANCE BETWEEN GROUND SURFACE AND TOP OF THE TEST ZONE	=	172.3	FT
	PIP - PACKER INFLATION PRESSURE (D PSI + 50 PSI)	=	180	PSI
	H1- DISTANCE BETWEEN WATER PRESSURE GAUGE AND GROUND SURFACE	=	177.6	FT
	H2- DISTANCE BETWEEN GROUND SURFACE AND GROUND WATER TABLE	=	11.95	FT

NOTE: Upon packer inflation, Below Zone transducer pressure increased to 241+ ft/water. High connectivity between Below Zone and In Zone was observed during pumping and recovery. Integrity of bottom packer was verified by deflating top packer and discontinuing air pressure on bottom packer. Pressure within bottom packer maintained 180psi. Drill rig winch line holding packer assembly was also slackened to verify integrity of bottom packer.

H2- DISTANCE BETWEEN GROUND SURFACE AND GROUND WATER TABLE	=	13.57	FT

NOTES:

The tested interval begins at the bottom of the well casing (10.2 ft b/g) and ends at 29.0 ft b/g.

Above zone transducer for this test was not installed until 14:35, after packers were inflated. During drawdown and recovery for this test, top packer was used only as a secondary source of data for In Zone transducer. Water level was drawn below AZ transducer.

At time of packer inflation, both packers were inflated. At 14:41, pump was run at 1.25 gpm to test connectivity between the intervals 19.3'-29.0' b/g and 10.2'-19.3' b/g. No connectivity was observed. Pump was turned off at 14:42 and top packer was deflated at 14:45.

After 3/4 hour, less than 0.3' recovery was observed at this test interval. "Recovery" sample was not taken for this test interval.

NOTES:
The tested interval begins at the bottom of the well casing (40.5 ft b/g) and ends at 49.0 ft b/g. Only the bottom packer was inflated for this interval.
After 1/2 hour, no recovery was observed at this test interval. "Recovery" sample was not taken for this test interval.
