**DOMINION ENERGY KEWAUNEE, INC.
KEWAUNEE POWER STATION
2013 ANNUAL RADILOGICAL ENVIRONMENTAL OPERATING REPORT**

Enclosed is the 2013 Annual Radiological Environmental Operating Report for the Kewaunee Power Station (KPS). This report was prepared by ATI Environmental Inc. and satisfies the requirements of KPS Technical Specification 5.6.1.

The results of the 2013 Land Use Census, submitted in accordance with the KPS Radiological Environmental Monitoring Manual, Section 2.2.2/2.3.2, are also included in this report.

If you have questions or require additional information, please feel free to contact Mr. Richard Repshas at 920-388-8217.

Very truly yours,

**Jeffrey T. Stafford
Director Safety and Licensing, Kewaunee Power Station**

1.0 INTRODUCTION

The Kewaunee Power Station is a 598 megawatt pressurized water reactor located on the Wisconsin shore of Lake Michigan in Kewaunee County. The Plant became critical on March 7, 1974. Initial power generation was achieved on April 8, 1974, and the Plant was declared commercial on June 16, 1974.

On February 25, 2013, Dominion Energy Kewaunee submitted a certification of intent to cease power operations to the Nuclear Regulatory Committee. Power Operation of the Kewaunee Power Station ceased on May 7, 2013. The fuel was permanently removed from the reactor and placed in the spent fuel pool for storage on May 14, 2013.

This report summarizes the environmental operation data collected during the period January - December 2013.

Dominion Energy Kewaunee, operator and owner of the Kewaunee Power Station, assumes responsibility for the environmental program at the Plant. Any questions should be directed to Mr. J. Michael Hale, Radiation Protection / Chemistry Manager, at (920) 388-8103.

This Page Intentionally Left Blank

2.0 SUMMARY

Results of sample analyses during the period January - December 2013 are summarized in Table 4.5. Radionuclide concentrations measured at indicator locations are compared with levels measured at control locations and in preoperational studies. In no instance were REMP threshold reporting levels exceeded.

This Page Intentionally Left Blank

3.0 RADIOLOGICAL SURVEILLANCE PROGRAM

Following is a description of the Radiological Surveillance Program and its execution.

3.1 METHODOLOGY

The sampling locations are shown in Figure 4-1. Table 4.1 describes the locations, lists for each direction and distance from the reactor, and defines which are indicators and control locations.

The sampling program monitors the air, terrestrial, and aquatic environments. The types of samples collected at each location and the frequency of collections are presented in Table 4.2, using sample codes defined in Table 4.3. The collections and analyses that comprise the program are described below. Finally, the execution of the program in the current reporting year is discussed.

3.1.1 The Air Program

Airborne Particulates

Airborne particulates are collected on 47 mm diameter, 1 μ m porosity glass fiber filters, at a volumetric rate of approx. one cubic foot per minute. The filters are collected weekly from six locations (K-1f, K-2, K-8, K-31, K-41 and K-43), and dispatched by mail to ATI Environmental, Inc. for radiometric analysis. The particulate filters are counted for gross beta activity, a minimum of three days after the date of collection, to allow for the decay of naturally-occurring short-lived radionuclides.

Quarterly composites from each sampling location are analyzed for gamma-emitting isotopes on a high-purity germanium (HPGe) detector.

Airborne Iodine

Charcoal traps are located at locations K-1f, K-2, K-8, K-31, K-41 and K-43. The traps are changed weekly and analyzed for iodine-131 immediately after arrival at the laboratory.

Ambient Gamma Radiation – TLDs

Ambient gamma radiation is monitored at the six air sampling locations (K-1f, K-2, K-8, K-31, K-41 and K-43), at three milk sampling locations (K-3, K-5, and K-39), and from five additional sites (K-15, located 9.25 miles northwest of the plant; K-17, located 4.25 miles west of the plant; K-25, located 1.9 miles southwest of the plant; K-27, located 1.5 miles northwest of the plant and K-30, located 1.0 miles north of the plant) by thermoluminescent dosimetry (TLD). Two TLD cards, each having four main readout areas containing CaSO₄:Dy phosphor, are placed at each location (eight TLDs at each location). One card is exchanged quarterly, the other card is exchanged annually and read only on an emergency basis.

Dosimeters have also been placed at eight additional locations (K-1L through K-1S), to monitor an Independent Spent Fuel Storage Installation (ISFSI). They are replaced and measured quarterly.

Precipitation

Monthly composites of precipitation samples are collected at K-11 and analyzed for tritium.

3.1.2 The Terrestrial Program

Milk

Milk samples are collected from three herds grazing within three miles of the reactor site (K-34, K-38 and K-44); from four herds that graze between 3-7 miles of the reactor site (K-3, K-5, K-35, and K-39); and one from a dairy in Green Bay (K-42), 28.1 miles from the reactor site.

The samples are collected twice per month during the grazing period (May through October) and monthly for the rest of the year. The samples are analyzed for iodine-131, strontium-89 and strontium-90, calcium, stable potassium and gamma-emitting isotopes.

Well Water

One gallon of water is collected quarterly from the four off-site well locations K-10, K-11, K-13 and K-38 and from two on-site wells located at K-1g and K-1h.

Gamma spectroscopic analysis, tritium and gross beta on the total residue are performed for each water sample. The concentration of potassium-40 is calculated from total potassium. Samples of water from the two on-site wells (K-1g and K-1h) are analyzed for gross alpha. Water samples from K-1g are also tested for strontium-89 and strontium-90.

Domestic Meat

Domestic meat is collected annually (if available) during the third quarter, from three locations in the vicinity of the plant (K-24, K-29, and K-32). The flesh is separated from the bone and analyzed for gross alpha, gross beta and gamma emitting isotopes.

Eggs

Eggs are collected quarterly from locations K-24 and K-32. Samples are analyzed for gross beta, strontium-89, strontium-90 and gamma-emitting isotopes.

Vegetables

Annually, during the third quarter, five varieties of vegetables are collected from location K-26. Samples may also be obtained from other local sources to supplement the program. In addition, two varieties of grain or leafy vegetables are collected annually from farmland owned by Dominion Energy Keweenaw (K-23a and K-23b) and rented to a private individual for growing crops. The samples are analyzed for gross beta, strontium-89, strontium-90 and gamma emitting isotopes.

Grass and Cattle Feed

Grass is collected during the second, third and fourth quarters from two on-site locations (K-1b and K-1f) and from the dairy farm locations (K-3, K-5, K-34, K-35, K-38 and K-39). Cattle feed is collected during the first quarter from the same farms. The samples are analyzed for gross beta, strontium-89, strontium-90 and gamma emitting isotopes.

Soil

Soil samples are collected twice a year on-site at K-1f and from the dairy farm locations (K-3, K-5, K-34, K-35, K-38 and K-39). The samples are analyzed for gross alpha, gross beta, strontium-89, strontium-90 and gamma emitting isotopes.

3.1.3 The Aquatic Program

Surface Water

One-gallon water samples are taken monthly from three locations on Lake Michigan: 1) at the point where the condenser water is discharged into Lake Michigan (K-1d); 2) Two Creeks Park (K-14) located 2.6 miles south of the reactor site; and 3) at the main pumping station located approximately equidistant from Kewaunee and Green Bay, which pumps water from the Rostok water intake (K-9) located 11.5 miles NNE of the reactor site. Both raw and tap water are collected at K-9. One-gallon water samples are taken monthly from three creeks that pass through the site (K-1a, K-1b, and K-1e). Samples from North and Middle Creeks (K-1a, K-1b) are collected near the mouth of each creek. Samples from the South Creek (K-1e) are collected about ten feet downstream from the point where the outflow from the two drain pipes meets. Additionally, the drainage pond (K-1k), located approximately 0.6 miles southwest of the plant, is included in the sampling program. Water samples at K-14 are collected and analyzed in duplicate.

The water is analyzed for gamma emitting isotopes, gross beta activity in total residue, dissolved and suspended solids, and potassium-40. The concentration of potassium-40 is calculated from the total potassium concentration. In addition, quarterly composites of monthly grab samples are analyzed for tritium, strontium-89 and strontium-90.

Fish

Fish samples are collected during the second, third and fourth quarters at location K-1d. The flesh is separated from the bones, gamma scanned and analyzed for gross beta activity. Ashed bone samples are analyzed for gross beta, strontium-89 and strontium-90.

Aquatic Slime

Periphyton (slime) or aquatic vegetation is collected during the second and third quarters from three Lake Michigan locations (K-1d, K-9 and K-14), from three creek locations (K-1a, K-1b and K-1e) and from the drainage pond (K-1k), if available. The samples are analyzed for gross beta activity. If the quantity is sufficient, analyses for gamma-emitting isotopes and strontium-89 and strontium-90 activities are performed.

Bottom Sediment

Bottom sediments are collected in May and November from five locations (K-1c, K-1d, K-1j, K-9 and K-14). The samples are analyzed for gross beta, strontium-89, strontium-90 and gamma emitting isotopes.

3.1.4 Program Execution

Program execution is summarized in Table 4.4. The program was executed for the year 2013 as described in the preceding sections, with the following exceptions:

Air Particulates / Air Iodine

A partial air particulate / air iodine sample (303 m^3) was collected at location K-1f, for the week ending 11/19/13. A planned power outage for maintenance on 11/14/13 resulted in a reduced run-time of 4.25 hours. (CR 533125)

A partial air particulate / air iodine sample (274 m^3) was collected at location K-8, for the week ending 08/13/13. A power interruption due to severe weather on 08/07/13 resulted in a reduced run-time of 18.1 hours. (CR 523183)

Thermoluminescent Dosimetry

The fourth quarter and annual TLDs from location K-17 could not be collected. The sampling site was buried under snow from plowing. If the TLDs are salvageable, the readings will be reported with the first quarter 2014 data.

Milk

Milk from location K-44 was no longer available for the February, 2013 collection. The farm has discontinued dairy operations. (CR 504725)

Domestic Meat

There was no poultry available from location K-29 in 2013.

Surface Water

Surface water location K-1a could not be sampled for the March, 2013 collection. The creek was frozen.

Surface water from location K-1k could not be sampled from January through April, August, September and December, 2013. The pond was frozen or inaccessible for collection.

3.1.5 Program Modifications

Milk sampling at the Schleis farm (K-44) was dropped in February, 2013. The farm has discontinued dairy operations.

Rev. 20, 10/15/2013, of the Radiological Environmental Monitoring Manual (REMM) updates Tables 2.21-A, 2.21-B and 2.21-C to delete milk sampling location K-44. A copy of the REMM is included with the Annual Radioactive Effluent Release Report.

3.2 RESULTS AND DISCUSSION

Results for the reporting period January to December, 2013 are presented in summary form in Table 4.5. For each type of analysis, of each sampled medium, the table shows the annual mean and range for all indicator and control locations. The location with the highest annual mean and the results for this location are also given.

The discussion of the results has been divided into three broad categories: the air, terrestrial, and aquatic environments. Within each category, samples will be discussed in the order listed in Table 4.4. Any discussion of previous environmental data for the Kewaunee Power Station refers to data collected by Environmental Inc., Midwest Laboratory.

Results of all measurements made in 2013 are not included in this section, although references to these results will be made in the discussion. A complete tabulation of results is provided in Part II of the 2013 annual report on the Radiological Monitoring Program for the Kewaunee Power Station.

3.2.1 Atmospheric Nuclear Detonations and Nuclear Accidents

There were no atmospheric nuclear tests or accidents reported in 2013. The Chernobyl and Fukushima Daiichi nuclear accidents occurred on April 26, 1986 and March 11, 2011, respectively, the last reported atmospheric nuclear test was conducted by the People's Republic of China on October 16, 1980. Contributions from these events have resulted in the presence of long-lived radioisotopes of cesium and strontium still detectable in the environment.

3.2.2 The Air Environment

Airborne Particulates

The annual gross beta concentration in air particulates averaged 0.024 pCi/m³ at indicator locations and 0.025 pCi/m³ at the control locations, similar to the means observed from 2002 (and prior to) through 2010, and slightly lower than means observed for 2011 and 2012. There is no indication of a plant effect, the average readings were evenly distributed between indicator and control locations. New sampler pumps were installed in the third quarter of 2010. The slight increases in beta activity may be due to a change in the calculated volume. Results are tabulated below.

Year	Average (Indicators)		Average (Controls)
	Concentration (pCi/m ³)		
2002	0.023		0.023
2003	0.022		0.022
2004	0.019		0.020
2005	0.023		0.023
2006	0.021		0.021
2007	0.022		0.021
2008	0.022		0.022
2009	0.023		0.023
2010	0.023		0.022
2011	0.029		0.029
2012	0.029		0.030
2013	0.024		0.025

Average annual gross beta concentrations in airborne particulates.

Airborne Particulates (continued)

Variation in the gross beta activity throughout the year is not unusual. Typically, higher beta averages occur during the months of January and December, and the first and fourth quarters, as noted in data from 2002 through 2013.

Gamma spectroscopic analysis of quarterly composites of air particulate filters yielded similar results for indicator and control locations. Beryllium-7, produced continuously in the upper atmosphere by cosmic radiation, was detected in all samples, with an average activity of 0.068 pCi/m³. All other gamma-emitting isotopes were below their respective LLD limits.

Airborne Iodine

Levels of airborne iodine-131 were below the lower limit of detection (LLD) of 0.030 pCi/m³ at all locations. There was no indication of a plant effect on the local air environment.

Ambient Gamma Radiation – TLDs

Ambient gamma radiation was monitored by TLDs at fourteen locations, eight indicators and six controls. Quarterly TLDs at the indicator locations measured a mean dose equivalent of (16.2 mR/91 days), in close agreement with the control locations (15.5 mR/91 days). The readings are similar to the averages obtained from 2002 (and prior to) through 2012.

For eight TLDs monitoring the Independent Spent Fuel Storage Installation, (K-1L through K-1S), measurements averaged 13.8 mR/91 days.

No plant effect on ambient gamma radiation was indicated. These values are lower than the United States average value of 19.5 mR/91 days due to natural background radiation (National Council on Radiation Protection and Measurements, 1975). The highest annual mean was 18.9 mR/91 days, measured at indicator location K-27.

<u>Year</u>	<u>Average (Indicators)</u>	<u>Average (Controls)</u>
Dose rate (mR/91 days)		
2002	16.1	15.1
2003	14.1	13.7
2004	14.8	14.0
2005	15.7	14.3
2006	16.4	15.0
2007	16.2	15.2
2008	15.6	14.2
2009	15.2	13.9
2010	15.2	14.3
2011	15.0	14.5
2012	16.1	15.3
2013	16.2	15.5

Ambient gamma radiation as measured by thermoluminescent dosimetry.
Average quarterly dose rates.

Precipitation

Precipitation was monitored for tritium at indicator location, K-11. The concentration was below the LLD level of 184 pCi/L in all samples.

3.2.3 The Terrestrial Environment

Milk

Of 131 samples tested for iodine-131 in milk, all measured below an LLD level of 0.5 pCi/L.

Strontium-89 concentrations measured below an LLD level of 1.3 pCi/L in all samples. Measurable levels of strontium-90 above an LLD level of 0.8 pCi/L were detected in thirty of eighty-five samples tested. Mean values were identical for indicator and control locations (1.0 pCi/L) and are similar to or less than averages seen from 1990 through 2012.

For gamma emitting isotopes, concentrations measured below the required limits of 15 pCi/L for barium-lanthanum-140 and 10 pCi/L for cesium-134 and cesium-137. Potassium-40 results were almost identical at both the indicator and control locations (1381 and 1445 pCi/L, respectively), and are comparable to levels observed from 1990 through 2012.

Detection of strontium, iodine and potassium activity is consistent with findings of the National Center for Radiological Health (1968). Most radiocontaminants in cattlefeed do not find their way into milk, exceptions are radioisotopes of potassium, cesium, strontium, barium, and iodine. Due to chemical similarities between strontium and calcium, and cesium and potassium, organisms tend to deposit strontium-89 and strontium-90 in bone and cesium-137 in the soft tissue and muscle. Consequently, ratios of strontium-90 activity to the weight of calcium in milk and cesium-137 activity to the weight of potassium in milk were monitored in order to detect potential environmental accumulation of these radionuclides. Measured concentrations of calcium and stable potassium are in agreement with previously determined values and averaged 1.07 and 1.72 g/L, respectively.

There was no indication of any effect due to the operation of the Kewaunee Power Station.

Well Water

One of eight samples for gross alpha analysis, from on-site well K-1h, measured above an LLD of 3.8 pCi/L, at 4.3 pCi/L. Gross beta activity above a detection limit of 3.4 pCi/L, was measured in five of the twenty indicator samples tested. Concentrations ranged from 3.5 to 6.6 pCi/L, and averaged 4.9 pCi/L. The gross alpha and beta activities detected in the ground water are most likely contributions from naturally-occurring daughters of radium and thorium.

Levels of strontium-89 and strontium-90 were measured for the on-site well (K-1g). The concentrations measured below LLD values of 0.9 and 0.6 pCi/L, respectively.

Samples were tested for tritium and gamma emitting isotopes. All tritium concentrations measured below a detection level of 150 pCi/L. Gamma-emitting isotopes measured below respective LLDs.

Potassium-40 averages were generally in proportion to gross beta measurements and in agreement with previously measured values. No plant effect was indicated.

Domestic Meat

In domestic meat samples, gross alpha measured 0.061 and 0.040 pCi/g for indicator and control locations, respectively, while the gross beta concentrations measured 2.97 pCi/g and 2.68 pCi/g. Gamma-spectroscopic analyses showed that most beta activity was due to naturally occurring potassium-40 (2.99 pCi/g and 2.40 pCi/g respectively). All other gamma-emitting isotopes measured below detection limits.

Eggs

In samples of eggs tested, the gross beta concentrations averaged 1.59 pCi/g at the indicator location and 1.30 pCi/g for the control location, similar to observed concentrations of naturally-occurring potassium-40 (1.37 and 1.23 pCi/g respectively). Other gamma-emitting isotopes were below their respective LLDs.

Levels of strontium-89 measured less than 0.012 pCi/g in all samples. A low level of strontium-90 was detected in one of the four control samples tested, at a concentration of 0.008 pCi/g. The trace radiostrontium in the environment is still attributed to nuclear testing from previous decades.

Vegetables and Grain

In vegetables, gross beta concentrations averaged 4.69 pCi/g at two indicator locations and 3.09 pCi/g for the control location K-26, due primarily to potassium-40 and beryllium-7 activity. All other gamma emitting isotopes measured below detection levels. No strontium-89 was detected above 0.009 pCi/g. Strontium-90 was found in one indicator and one control sample tested, at concentrations of 0.008 pCi/g and 0.005 pCi/g, respectively.

In two samples of wheat and clover collected from location K-23, the gross beta concentrations averaged 5.43 pCi/g, due primarily to activity from potassium-40 and beryllium-7.

Strontium-89 and strontium-90 measured below respective LLDs of 0.052 pCi/g and 0.016 pCi/g.

Grass and Cattle Feed

In grass, mean gross beta measured 9.21 and 8.28 pCi/g at indicator and control locations, respectively. In all cases the activity was predominantly due to naturally occurring potassium-40 and beryllium-7. Other gamma-emitting isotopes were below respective LLDs. Strontium-89 and strontium-90 both tested below detection limits of 0.066 pCi/g and 0.026 pCi/g, respectively.

For cattlefeed, gross beta concentrations were similar for indicator and control locations (9.18 pCi/g and 8.27 pCi/g, respectively), and reflected potassium-40 / beryllium-7 levels observed (7.90 and 7.30 pCi/g, respectively). No strontium-89 activity was detected. Strontium-90 was found in two of the eight indicator samples tested and averaged 0.027 pCi/g.

With the exception of the naturally-occurring beryllium and potassium, gamma-emitting isotopes were below detection levels.

Soil

Gross alpha concentrations in soil averaged 7.46 pCi/g dry at five indicator locations and 8.95 pCi/g dry at the two control locations. Mean gross beta levels measured at indicator and control locations averaged 26.53 and 25.75 pCi/g, respectively, primarily due to potassium-40 activity. Strontium-89 was below an LLD level of 0.11 pCi/g dry in all samples. A low level of strontium-90 activity was detected in two of the ten indicator samples, at a mean concentration of 0.045 pCi/g and one control sample at 0.039 pCi/g. Trace radiostrontium in the environment can still be attributed to nuclear testing from previous decades.

Soil (continued)

Cesium-137 was detected in thirteen of fourteen soil samples, similar at both indicator and control locations (0.10 and 0.14 pCi/g, respectively). Potassium-40 was detected in all samples and averaged 18.24 and 20.99 pCi/g for indicator and control locations, respectively. All other gamma-emitting isotopes were below respective LLD's. The levels of detected activities are similar to those observed from 1990 through 2012. The data suggests no evidence of a plant effect.

3.2.4 The Aquatic Environment

Surface Water

Gross beta activity in surface water measured higher at the indicator locations (5.7 pCi/L) than at the control locations (1.5 pCi/L). A similar pattern of activity has been observed since 1978. In 2013, the highest activities measured were sampled from the K-1a creek. The average activity was 16.6 pCi/L, with a range of 2.8 to 72.2 pCi/L, due primarily to potassium-40 activity. The potassium-40 concentrations averaged 11.6 pCi/L and ranged from 1.6 to 51.9 pCi/L.

Year	Average (Indicators)	Average (Controls)
	Gross Beta (pCi/L)	
2002	5.7	2.2
2003	7.3	2.4
2004	6.2	2.3
2005	5.2	1.7
2006	5.5	1.8
2007	5.7	1.8
2008	4.7	1.5
2009	4.7	1.5

Average annual gross beta concentrations in surface water.

These differences in activity are due in part to the indicator location (K-1k), a pond formed by drainage of surrounding fields to the southwest. The control sample is Lake Michigan water, which varies very little in gross beta concentration during the year, while indicator samples include the two creek locations (K-1a and K-1e) which are much higher in gross beta concentration and exhibit large month-to-month variations. The K-1a creek draws its water from the surrounding fields which are heavily fertilized; and the K-1e creek draws its water mainly from the Sewage Treatment Plant. In general, gross beta concentrations were high when potassium-40 levels were high and low when potassium-40 levels were low, indicating that fluctuations in beta concentration were due to variations in potassium-40 concentrations and not to plant operations. The fact that similar fluctuations at these locations were observed in pre-operational studies conducted prior to 1974 supports this assessment.

In nine of twenty-seven indicator samples tested, (quarterly composites of monthly samples), positive tritium activity was detected, above LLD, at an average concentration of 395 pCi/L, ranging from 176 to 1782 pCi/L. The highest activities observed were from measurements taken at the discharge location, K-1d, most likely due to scheduled releases.

All analyses for strontium-89 measured below an LLD of 2.6 pCi/L. One sample, from the K-1k pond, measured 0.9 pCi/L for strontium-90. All other samples were less than an LLD of 0.8 pCi/L Gamma-emitting isotopes measured below their respective LLDs in all samples.

Fish

In fish, gross beta concentrations averaged 3.10 pCi/g in muscle and 3.11 pCi/g in bone fractions. In muscle, the gross beta concentration was primarily due to potassium-40 activity.

Excluding potassium-40, gamma-emitting isotopes measured below their respective LLDs in all samples.

Strontium-89 concentrations in the bone were below an LLD of 0.23 pCi/g. Strontium-90 was detected in two of three samples and averaged 0.27 pCi/g.

Periphyton (Slime) or Aquatic Vegetation

In periphyton (slime) and aquatic vegetation samples, mean gross beta concentrations for indicator and control locations measured 5.40 and 6.87 pCi/g, respectively, due primarily to combined potassium-40 and beryllium-7 activity (3.74 and 5.88 pCi/g, respectively).

Trace cobalt-60 activity was detected in four of twelve indicator samples tested with an average concentration of 0.022 pCi/g wet. Cesium-137 was measured in two of twelve indicator samples, also at a level of 0.022 pCi/g wet. Other gamma-emitting isotopes, with the exception of naturally-occurring beryllium-7 and potassium-40, were below their respective LLDs.

No strontium-89 or strontium-90 activity was measured above detection levels of 0.15 and 0.040 pCi/g wet, respectively.

Bottom Sediments

In bottom sediment samples, the mean gross beta concentrations measured 12.78 pCi/g at the indicator locations versus 17.24 pCi/g at the control location.

Cs-134 measured below the LLD level of 0.019 pCi/g for all samples tested. Low levels of cesium-137 were observed in both indicator and control samples and measured 0.025 and 0.050 pCi/g dry, respectively. On average, cesium-137 measurements are lower than or similar to levels observed from 1979 through 2012. Other gamma-emitting isotopes, with the exception of naturally-occurring potassium-40, were below their respective LLDs.

Both strontium-89 and strontium-90 concentrations measured below detection limits (0.081 and 0.036 pCi/g, respectively) in all samples tested.

3.3 LAND USE CENSUS

The Land Use Census satisfies the requirements of the KPS Radiological Environmental Monitoring Manual. Section 2.2.2 states:

"A land use census shall be conducted and shall identify within a distance of 8 km (5 mi.) the location, in each of the 10 meteorological sectors, of the nearest milk animal, the nearest residence and the nearest garden of greater than 50m² (500 ft²) producing broad leaf vegetation." (Figure 4-1)

The 2013 Land Use Census was completed to identify the presence of the nearest milk animals, gardens and farm crops surrounding the Kewaunee Power Station. The Land Use Census was completed on September 5, 2013. The census is conducted annually during the growing season per Health Physics Procedure RP-KW-001-014.

For the 2013 census, map locations were verified for distance and direction. Greater accuracy in measurement resulted in minor distance and directional changes. Results of the 2013 census are summarized in Table 4.6. Changes from the 2012 census are listed by sector. In summary, the highest D/Q locations for nearest garden, nearest residence and nearest milk animal did not change from the 2012 census.

3.4 LABORATORY PROCEDURES

Analytical Procedures used by Environmental, Inc. are on file and are available for inspection. Procedures are based on those prescribed by the Health and Safety Laboratory of the U.S. Dep't of Energy, Edition 28, 1997, U.S. Environmental Protection Agency for Measurement of Radioactivity in Drinking Water, 1980, and the U.S. Environmental Protection Agency, EERF, Radiochemical Procedures Manual, 1984.

Environmental, Inc., Midwest Laboratory has a comprehensive quality control/quality assurance program designed to assure the reliability of data obtained. Details of the QA Program are presented elsewhere (Environmental, Inc., Midwest Laboratory, 2012). The QA Program includes participation in Interlaboratory Comparison (crosscheck) Programs. Results obtained are presented in Appendix A.

^a GA = gross alpha, GB = gross beta, GS = gamma spectroscopy, TR = total residue.^b LLD = nominal lower limit of detection based on a 4.66 sigma counting error for background sample.^c Mean and range are based on detectable measurements only (i.e., >LLD) Fraction of detectable measurements at specified locations is indicated in parentheses (F).^d Locations are specified by station code (Table 4.1) and distance (miles) and direction relative to reactor site.^e Non-routine results are those which exceed ten times the control station value. If no control station value is available, the result is considered non-routine if it exceeds ten times the preoperational value for the location.

Table 4.6 Land Use Census

The following table lists an inventory of residence, gardens $\geq 500 \text{ ft}^2$ and milk animals found nearest to the plant in each of the 10 meteorological sectors within a five mile radius of the Kewaunee Power Station. (Figure 4-1)

Sector	Township No.	Residence	Garden	Milk Animals	Distance From Plant (miles)	Location ID
A	1			X	4.62	
A	12		X		3.71	
A	24	X			1.12	
B	18			X	2.70	K-34
B	24	X			1.01	
B	18		X		2.12	
R	23			X	2.16	
R	23		X		2.16	
R	26	X			0.96	K-11
Q	23	X			1.27	
Q	23		X	X	1.53	K-27
P	27		X	X	2.45	K-38
P	26	X			1.35	
N	26		X		1.03	
N	28			X	2.37	
N	35	X			0.94	
M	3		X		2.47	
M	35	X			1.38	
M	4			X	2.89	
L	35	X			1.00	
L	2		X		1.00	
L	4			X	3.26	
K	15			X	3.40	
K	36	X			0.91	
K	36		X		0.91	
J	11	X		(Note 2)	2.72	
J	11		X	(Note 2)	2.72	

Note 1. Bold Type denotes change from previous census.

Note 2. There were no milk animals located in Sector J within five miles of the Kewaunee Power Station.

Land Use Census (continued)

The following is a sector by sector listing of those changes between the 2012 and 2013 census.

Sector A	Township 24	New nearest resident (summer/weekends), Kennick. 1.12 miles.
Sector A	Township 12	New nearest garden location, B. Schad, 3.71 miles.
Sector A	Township 1	New nearest milk animal location, J. Wakker. 4.62 miles.
Sector B	Township 24	Nearest resident, name changed to Shane Rusch, 1.01 miles.
Sector B	Township 18	New nearest garden location, W. Zemke, 2.12 miles.
Sector J	Township 11	New nearest resident and garden location, J. Knorr, 2.72 miles.
Sector K	Township 36	New nearest resident and garden location, K. Krofta, 0.91 miles.
Sector K	Township 15	New nearest milk animal location. Distance revised to 3.40 miles.
Sector L	Township 35	New nearest resident and garden location, D. Smith, 1.00 miles.
Sector L	Township 4	New nearest milk animal location, N. Smidell, 3.26 miles.
Sector M	Township 35	Nearest resident, name changed to M. Peterson, 1.38 miles.
Sector M	Township 3	New nearest garden location, P. Tulachka, 2.47 miles.
Sector M	Township 4	New nearest milk animal location, W. Hlinak, 2.89 miles.
Sector N	Township 35	Nearest resident location. Distance revised to 0.94 miles.
Sector N	Township 26	Nearest garden location. Distance revised to 1.03 miles.
Sector N	Township 26	Nearest milk animal location. Distance revised to 2.37 miles.
Sector P	Township 27	New nearest resident location, B. Reed, 1.35 miles.
Sector Q	Township 23	Nearest resident location. Distance revised to 1.27 miles.
Sector Q	Township 23	Nearest garden location. Distance revised to 1.53 miles.
Sector Q	Township 23	Nearest milk animal location. Distance revised to 1.53 miles.
Sector R	Township 23	New nearest garden location, T. Augustian, 2.16 miles.
Sector R	Township 23	New nearest milk animal location. Distance revised to 2.16 miles.

APPENDIX A

INTERLABORATORY COMPARISON PROGRAM RESULTS

NOTE: Environmental Inc., Midwest Laboratory participates in intercomparison studies administered by Environmental Resources Associates, and serves as a replacement for studies conducted previously by the U.S. EPA Environmental Monitoring Systems Laboratory, Las Vegas, Nevada. Results are reported in Appendix A. TLD Intercomparison results, in-house spikes, blanks, duplicates and mixed analyte performance evaluation program results are also reported. Appendix A is updated four times a year; the complete Appendix is included in March, June, September and December monthly progress reports only.

January through December, 2013

Appendix A
Interlaboratory Comparison Program Results

Environmental, Inc., Midwest Laboratory has participated in interlaboratory comparison (crosscheck) programs since the formulation of its quality control program in December 1971. These programs are operated by agencies which supply environmental type samples containing concentrations of radionuclides known to the issuing agency but not to participant laboratories. The purpose of such a program is to provide an independent check on a laboratory's analytical procedures and to alert it of any possible problems.

Participant laboratories measure the concentration of specified radionuclides and report them to the issuing agency. Several months later, the agency reports the known values to the participant laboratories and specifies control limits. Results consistently higher or lower than the known values or outside the control limits indicate a need to check the instruments or procedures used.

Results in Table A-1 were obtained through participation in the environmental sample crosscheck program administered by Environmental Resources Associates, serving as a replacement for studies conducted previously by the U.S. EPA Environmental Monitoring Systems Laboratory, Las Vegas, Nevada.

Table A-2 lists results for thermoluminescent dosimeters (TLDs), via International Intercomparison of Environmental Dosimeters, when available, and internal laboratory testing.

Table A-3 lists results of the analyses on in-house "spiked" samples for the past twelve months. All samples are prepared using NIST traceable sources. Data for previous years available upon request.

Table A-4 lists results of the analyses on in-house "blank" samples for the past twelve months. Data for previous years available upon request.

Table A-5 lists REMP specific analytical results from the in-house "duplicate" program for the past twelve months. Acceptance is based on the difference of the results being less than the sum of the errors. Complete analytical data for duplicate analyses is available upon request.

The results in Table A-6 were obtained through participation in the Mixed Analyte Performance Evaluation Program.

Results in Table A-7 were obtained through participation in the environmental sample crosscheck program administered by Environmental Resources Associates, serving as a replacement for studies conducted previously by the Environmental Measurement Laboratory Quality Assessment Program (EML).

Attachment A lists the laboratory precision at the 1 sigma level for various analyses. The acceptance criteria in Table A-3 is set at ± 2 sigma.

Out-of-limit results are explained directly below the result.

Attachment A

ACCEPTANCE CRITERIA FOR "SPIKED" SAMPLES

LABORATORY PRECISION: ONE STANDARD DEVIATION VALUES FOR VARIOUS ANALYSES^a

Analysis	Level	One standard deviation for single determination
Gamma Emitters	5 to 100 pCi/liter or kg > 100 pCi/liter or kg	5.0 pCi/liter 5% of known value
Strontium-89 ^b	5 to 50 pCi/liter or kg > 50 pCi/liter or kg	5.0 pCi/liter 10% of known value
Strontium-90 ^b	2 to 30 pCi/liter or kg > 30 pCi/liter or kg	5.0 pCi/liter 10% of known value
Potassium-40	≥ 0.1 g/liter or kg	5% of known value
Gross alpha	≤ 20 pCi/liter > 20 pCi/liter	5.0 pCi/liter 25% of known value
Gross beta	≤ 100 pCi/liter > 100 pCi/liter	5.0 pCi/liter 5% of known value
Tritium	≤ 4,000 pCi/liter > 4,000 pCi/liter	± 1σ = 169.85 x (known) ^{0.0933} 10% of known value
Radium-226,-228	≥ 0.1 pCi/liter	15% of known value
Plutonium	≥ 0.1 pCi/liter, gram, or sample	10% of known value
Iodine-131, Iodine-129 ^b	≤ 55 pCi/liter > 55 pCi/liter	6 pCi/liter 10% of known value
Uranium-238, Nickel-63 ^b Technetium-99 ^b	≤ 35 pCi/liter > 35 pCi/liter	6 pCi/liter 15% of known value
Iron-55 ^b	50 to 100 pCi/liter > 100 pCi/liter	10 pCi/liter 10% of known value
Other Analyses ^b	---	20% of known value

^a Results obtained by Environmental, Inc., Midwest Laboratory as a participant in the crosscheck program for proficiency testing in drinking water conducted by Environmental Resources Associates (ERA).

^b Unless otherwise indicated, the laboratory result is given as the mean ± standard deviation for three determinations.

^c Results are presented as the known values, expected laboratory precision (1 sigma, 1 determination) and control limits as provided by ERA.

^d The reported result was obtained in the first cycle of counting. It can be positively biased due to extra beta counts contributed by Pb-214 and Bi-214 daughters of Rn-222. Result of second cycle of counting 4.47 pCi/L.

^a Liquid sample results are reported in pCi/Liter, air filters(pCi/m³), charcoal (pCi/charcoal canister), and solid samples (pCi/kg).^b Laboratory codes : W (Water), MI (milk), AP (air filter), SO (soil), VE (vegetation), CH (charcoal canister), F (fish), U (urine).^c Results are based on single determinations.^d Control limits are established from the precision values listed in Attachment A of this report, adjusted to ± 2s.

NOTE: For fish, Jello is used for the Spike matrix. For Vegetation, cabbage is used for the Spike matrix.

Note: Duplicate analyses are performed on every twentieth sample received in-house. Results are not listed for those analyses with activities that measure below the LLD.

^a Results are reported in units of pCi/L, except for air filters (pCi/Filter), food products, vegetation, soil, sediment (pCi/g).

^a Results are reported in units of Bq/kg (soil), Bq/L (water) or Bq/total sample (filters, vegetation).^b Laboratory codes as follows: MAW (water), MAAP (air filter), MASO (soil), MAVE (vegetation).^c MAPEP results are presented as the known values and expected laboratory precision (1 sigma, 1 determination) and control limits as defined by the MAPEP. A known value of "zero" indicates an analysis was included in the testing series as a "false positive". MAPEP does not provide control limits.^d Provided in the series for "sensitivity evaluation". MAPEP does not provide control limits.^e The filter was recounted overnight, no significant alpha activity could be detected.^f The sample was reanalyzed using additional fuming nitric separations. Result of reanalysis: 574.4 ± 35.2 Bq/kg.^g Interference from Eu-152 resulted in misidentification of Co-57.^h Result of repeat analysis: 0.031 ± 0.013 pCi/filter.

^a Results obtained by Environmental, Inc., Midwest Laboratory as a participant in the crosscheck program for proficiency testing administered by Environmental Resources Associates, serving as a replacement for studies conducted previously by the Environmental Measurements Laboratory Quality Assessment Program (EML).

^b Laboratory codes as follows: ERW (water), ERAP (air filter), ERSO (soil), ERVE (vegetation). Results are reported in units of pCi/L, except for air filters (pCi/Filter), vegetation and soil (pCi/kg).

^c Unless otherwise indicated, the laboratory result is given as the mean ± standard deviation for three determinations.

^d Results are presented as the known values, expected laboratory precision (1 sigma, 1 determination) and control limits as provided by ERA. A known value of "zero" indicates an analysis was included in the testing series as a "false positive". Control limits are not provided.

APPENDIX B. DATA REPORTING CONVENTIONS

Data Reporting Conventions

- 1.0. All activities, except gross alpha and gross beta, are decay corrected to collection time or the end of the collection period.

2.0. Single Measurements

Each single measurement is reported as follows: $x \pm s$

where: x = value of the measurement;

$s = 2\sigma$ counting uncertainty (corresponding to the 95% confidence level).

In cases where the activity is less than the lower limit of detection L , it is reported as: $< L$, where L = the lower limit of detection based on 4.66σ uncertainty for a background sample.

3.0. Duplicate analyses

If duplicate analyses are reported, the convention is as follows. :

3.1. Individual results: For two analysis results; $x_1 \pm s_1$ and $x_2 \pm s_2$

Reported result: $x \pm s$; where $x = (1/2)(x_1 + x_2)$ and $s = (1/2) \sqrt{s_1^2 + s_2^2}$

3.2. Individual results: $< L_1$, $< L_2$ Reported result: $< L$, where L = lower of L_1 and L_2

3.3. Individual results: $x \pm s$, $< L$ Reported result: $x \pm s$ if $x \geq L$; $< L$ otherwise.

4.0. Computation of Averages and Standard Deviations

- 4.1 Averages and standard deviations listed in the tables are computed from all of the individual measurements over the period averaged; for example, an annual standard deviation would not be the average of quarterly standard deviations. The average \bar{x} and standard deviation "s" of a set of n numbers $x_1, x_2 \dots x_n$ are defined as follows:

$$\bar{x} = \frac{1}{n} \sum x \quad s = \sqrt{\frac{\sum (x - \bar{x})^2}{n-1}}$$

- 4.2 Values below the highest lower limit of detection are not included in the average.

- 4.3 If all values in the averaging group are less than the highest LLD, the highest LLD is reported.

- 4.4 If all but one of the values are less than the highest LLD, the single value x and associated two sigma error is reported.

- 4.5 In rounding off, the following rules are followed:

- 4.5.1. If the number following those to be retained is less than 5, the number is dropped, and the retained numbers are kept unchanged. As an example, 11.443 is rounded off to 11.44.
- 4.5.2. If the number following those to be retained is equal to or greater than 5, the number is dropped and the last retained number is raised by 1. As an example, 11.445 is rounded off to 11.45.

APPENDIX C

Table C-1. Effluent Concentrations.^a

	Air (pCi/m ³)		Water (pCi/L)
Gross alpha	1×10^{-3}	Strontium-89	8,000
Gross beta	1	Strontium-90	500
Iodine-131 ^b	2.8×10^{-1}	Cesium-137	1,000
		Barium-140	8,000
		Iodine-131	1,000
		Potassium-40 ^c	4,000
		Gross alpha	2
		Gross beta	10
		Tritium	1×10^6

^a Taken from Table 2 of Appendix B to Code of Federal Regulations Title 10, Part 20, and appropriate footnotes. Concentrations may be averaged over a period not greater than one year.

^b Value adjusted by a factor of 700 to reduce the dose resulting from the air-grass-cow-milk-child pathway.

^c A natural radionuclide.

13	Precipitation, collected at Location K-11, analysis for tritium	33
14	Milk, analysis for iodine-131 and gamma emitting isotopes	34
15	Milk, analysis for strontium-89, strontium-90, calcium and potassium-40	38
16	Well water, analysis for gross alpha, gross beta, tritium, strontium-89, strontium-90, potassium-40, and gamma-emitting isotopes.	41
17	Well water, analysis for gross beta, tritium, potassium-40 and gamma-emitting isotopes	42
18	Domestic meat, analysis of flesh for gross alpha, gross beta, and gamma-emitting isotopes	44
19	Eggs, analysis for gross beta, strontium-89, strontium-90, and gamma-emitting isotopes	45
20	Vegetables, analysis for gross beta, strontium-89, strontium-90, and gamma-emitting isotopes	46
21	Cattlefeed, analysis for gross beta, strontium-89, strontium-90, and gamma-emitting isotopes	48
22	Grass, analysis for gross beta, strontium-89, strontium-90, and gamma-emitting isotopes	50
23	Soil, analysis for gross alpha, gross beta, strontium-89, strontium-90 and gamma-emitting isotopes	53
24	Surface water, analysis for gross beta, potassium-40, and gamma-emitting isotopes	56
25	Surface water, analysis for tritium, strontium-89, and strontium-90	74
26	Fish samples, analysis for gross beta, strontium-89, strontium-90, and gamma-emitting isotopes	76
27	Slime, analysis for gross beta, strontium-89, strontium-90 and gamma emitting isotopes	77
28	Bottom sediments, analysis for gross beta, strontium-89, strontium-90, and gamma-emitting isotopes	79

This Page Intentionally Left Blank

1.0 INTRODUCTION

The following constitutes Part II of the final report for the 2013 Radiological Monitoring Program conducted at the Kewaunee Power Station (KPS), Kewaunee, Wisconsin.

Included are tabulations of data for all samples collected in 2013 along with graphs of data trends. A summary and interpretation of the data presented here are published in Part I of the 2013 Annual Report on the Radiological Monitoring Program for the Kewaunee Power Station.

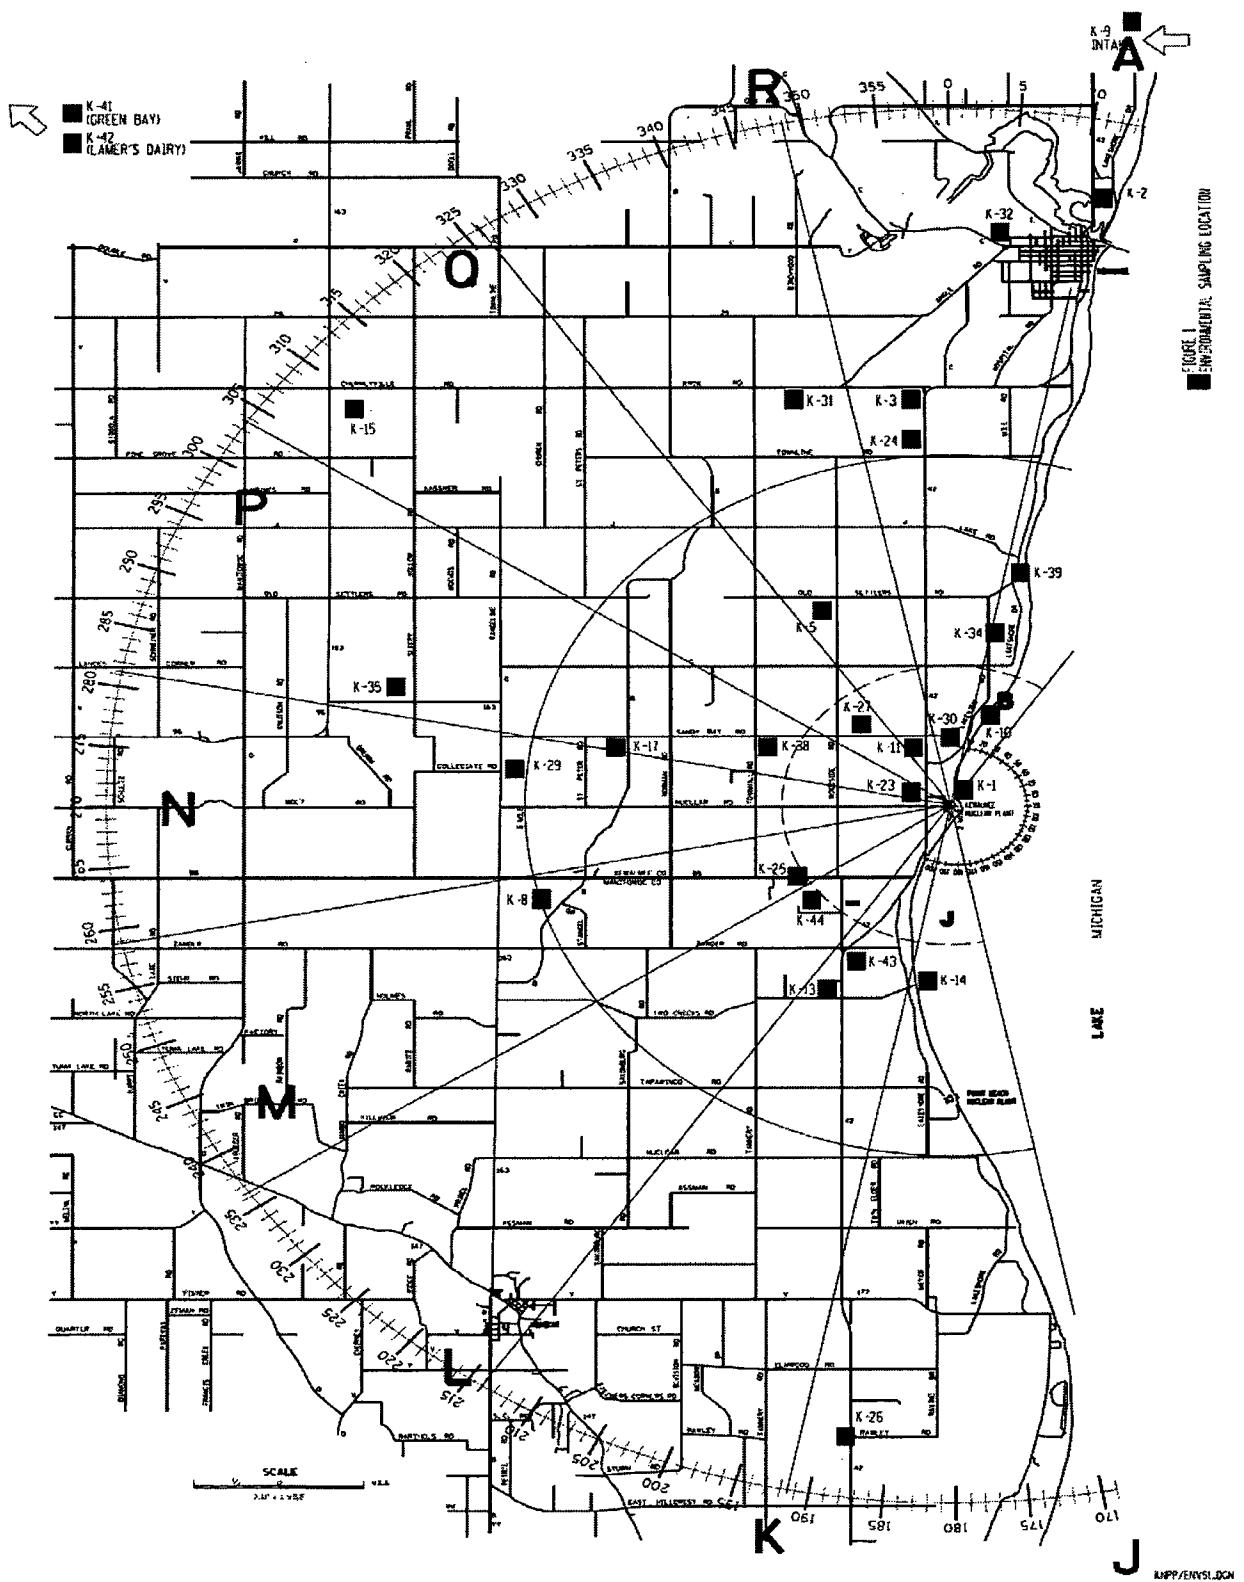

Figure 1. Sampling locations, Kewaunee Power Station

Table 1. Sampling locations, Kewaunee Power Station.

Code	Type ^a	Distance (miles) ^b and Sector	Location
K-1	I		Onsite
K-1a	I	0.62 N	North Creek
K-1b	I	0.12 N	Middle Creek
K-1c	I	0.10 N	500' north of condenser discharge
K-1d	I	0.10 E	Condenser discharge
K-1e	I	0.12 S	South Creek
K-1f	I	0.12 S	Meteorological Tower
K-1g	I	0.06 W	South Well
K-1h	I	0.12 NW	North Well
K-1j	I	0.10 S	500' south of condenser discharge
K-1k	I	0.60 SW	Drainage Pond, south of plant
K-1l	I	0.13 N	ISFSI Southeast
K-1m	I	0.15 N	ISFSI East
K-1n	I	0.16 N	ISFSI Northwest
K-1o	I	0.16 N	ISFSI North
K-1p	I	0.17 N	ISFSI Northwest
K-1q	I	0.16 N	ISFSI West
K-1r	I	0.13 N	ISFSI West
K-1s	I	0.12 N	ISFSI Southwest
K-2	C	8.91 NNE	WPS Operations Building in Kewaunee
K-3	C	5.9 N	Lyle and John Siegmund Farm, N2815 Hy 42, Kewaunee
K-5	I	3.2 NNW	Ed Paplham Farm, E4160 Old Settlers Rd, Kewaunee
K-8	C	4.85 WSW	St. Isadore the Farmer Church, 18424 Tisch Mills Rd, Tisch Mills
K-9	C	11.5 NNE	Green Bay Municipal Pumping Station, six miles east of Green Bay (sample source is Lake Michigan water from Rostok Intake, two miles north of Kewaunee).
K-10	I	1.35 NNE	Turner Farm, Kewaunee site
K-11	I	0.96 NW	Harlan Ihlenfeld Farm, N879 Hy 42, Kewaunee
K-13	C	3.0 SSW	Rand's General Store, Two Creeks
K-14	I	2.6 S	Two Creeks Park, 2.6 miles south of site
K-15	C	9.25 NW	Gas Substation, 1.5 miles north of Stangelville
K-17	I	4.0 W	Jansky's Farm, N885 Tk B, Kewaunee
K-23a	I	0.5 W	0.5 miles west of plant, Kewaunee site
K-23b	I	0.6 N	0.6 miles north of plant, Kewaunee site
K-24	I	5.4 N	Fictum Farm, N2653 Hy 42, Kewaunee
K-25	I	1.9 SW	Wotacheck Farm, 3968 E. Cty Tk BB, Two Rivers
K-26	C	9.1 SSW	Sandy's Vegetable Stand (8.0 miles south of "BB")

Table 1. Sampling locations, Kewaunee Power Station (continued).

Code	Type ^a	Distance (miles) ^b and Sector	Location
K-27	I	1.53 NW	Schleis Farm, E4298 Sandy Bay Rd, Kewaunee
K-29	I	5.34 W	Kunesh Farm, E3873 Cty Tk G, Kewaunee
K-30	I	0.8 N	End of site boundary
K-31	C	6.35 NNW	E. Krok Substation, Krok Road
K-32	C	7.8 N	Piggly Wiggly, 931 Marquette Dr., Kewaunee
K-34	I	2.7 N	Leon and Vicki Struck, N1549 Lakeshore Dr., Kewaunee
K-35	C	6.71 mi. WNW	Duane Ducat, N1215 Sleepy Hollow Rd., Kewaunee
K-36	I		Fiala's Fish market, 216 Milwaukee, Kewaunee
K-38	I	2.45 mi. WNW	Dave Sinkula Farm, N890 Town Hall Road, Kewaunee
K-39	I	3.46 mi. N	Francis Wojta, N1859 Lakeshore Dr., Kewaunee
K-41	C	22 NW	KPS-EOF, 3060 Voyager Dr. , Green Bay
K-42	C	28.1 W	Lamers Dairy Products obtained from Green Bay markets.
K-43	I	2.71 SSW	Gary Maigatter Property, 17333 Hwy 42, Two Rivers
K-44	I	2.63 SW	Gerald Schleis Property, 4728 Schleis Rd., Two Rivers

^a I = indicator; C = control.

^b Distances are measured from reactor stack.

K-44		MI ^c			

^a Three times a year, second, third and fourth quarters.

^b Collected in May and November.

^c Monthly November - April; semimonthly May - October.

^d First quarter (January, February, March) only.

^e Alternate, if milk is not available.

^f Second and third quarters.

^g Frequency may be increased dependent on dust loading.

^h Two samples are collected, North (K-14a) and South (K-14b) of Two Creeks Road.

ⁱ Two samples, raw and treated.

Table 3. Sample Codes:

<u>Code</u>	<u>Description</u>
AI	Airborne Iodine
AP	Airborne particulates
BS	Bottom sediments
CF	Cattlefeed
DM	Domestic Meat
EG	Eggs
FI	Fish
GLV	Green Leafy Vegetables
GRN	Grain
GR	Grass
MI	Milk
PR	Precipitation
SL	Slime
SO	Soil
SW	Surface water
TLD	Thermoluminescent Dosimeter
VE	Vegetables
WW	Well water

GRAPHS OF DATA TRENDS

Note: Conventions used in trending data.

The following conventions should be used in the interpretation of the graphs of data trends:

1. Both solid and open data points may be used in the graphs. A solid point indicates an activity, an open point, a lower limit of detection (LLD) value.
2. Data points are connected by a solid line. A break in the plot indicates missing data.

Section 1

Applicable to site:	KEWA
Record #:	CR533125
Revision Number:	0
Submitter:	HOLSCHBACH, DARRYL M
Submitter Dept.:	KEWA - Chemistry
Submitter Phone Number:	8146
Submitter Pager Number:	3050323
One-Line Description:	Document planned loss of power to Air sampler K-1f
Description:	This CR is to document the planned loss of power to environmental air sampler K-1f. Power was out for Work Order KW100721249 13504BKR maintenance Per procedure Chemistry was notified that K-1f Air Sampler would be out of service when MCC35B is de-energized during 13504BKR maintenance. Total time lost was 4 hours and 25minutes. Time out of service was identified by air sampler telemetry and verified when the sample filters were exchanged.
Discovery Date:	Request a corrective action to document the power outage in the Annual Radiological Environmental Monitoring Report.
Discovery Time:	11/14/2013
Method of Discovery:	11:25:00
Literal 1:	SELR (Self-revealing issue)
Associated with Boric Acid?:	If this CR is associated with the BACC Program, please ensure that the CR Description contains sufficient information to ensure the ability to quickly locate the component, which will ensure ALARA.
Applicable to unit:	No
Associated w/ Equipment Location?:	None
System(s):	No
Equipment Location Display:	63-MET--METEOROLOGICAL/ENV
Equipment Location Links:	Equipment Location - Critical Component - PRA Flag - Quality Classification - Component Description
Initial Actions:	Chemistry was notified by electrical maintenance of planned power outage. Total time out was verified.
Additional C/A processes req'd?:	Other
Text Question 1:	Provide details for any Additional C/A processes needed:
Text Answer 1:	Request a corrective action to document the power outage in the Annual Radiological Environmental Monitoring Report.
C/As Initiated (REA, WR, ETC):	
Tag Hung:	No
Tag Number:	
Additional Contacts:	
Supervisor - CR Review:	HALE, JAMES M.

Question G:	Is this CR an Operability/Reportability Issue Requiring O/R Review?
Yes/No G:	Yes
Question H:	Does this CR affect personnel safety?
Yes/No H:	No
Question I:	Does this CR affect plant safety?
Yes/No I:	No
Question J:	Does this CR involve plant equipment?
Yes/No J:	No
Question K:	Is this CR an environmental concern?
Yes/No K:	No
Literal 2:	Unit Conditions:
Unit 1% Pwr:	0
Unit 2% Pwr:	NA
Unit 3% Pwr:	NA
Unit 1 Mode:	7
Unit 2 Mode:	NA
Unit 3 Mode:	NA
OP-AA-102 Review Req'd?:	Yes
Is a TS SSC Affected?:	No
TS SSC Operability Assessment:	N/A
Text Question 2:	Basis for operability:
Text Answer 2:	NON-FUNCTIONAL. K-1f Environmental Air Sampler was NON-FUNCTIONAL during planned maintenance.
Question L:	The K-1f Environmental Air Sampler is required per Table 2.2.1-A, Radiological Environmental Monitoring Manual. Per Table 2.2.1-A if specimens are unobtainable due to sampling equipment malfunction, reasonable efforts shall be made to correct the problem prior to the end of the next sampling period. Per Table 2.2.1-B of the REMM, samples for Airborne Particulate are required weekly. Power has now been restored and K-1f Environmental Air Sampler is returned to functional.
Yes / No L:	Is an Operability Assessment req'd for an SSC, which is Functional for its TRM function, to demonstrate operability for its TS function?
Literal 4:	No The basis for establishing IOD can be documented in the "Basis for Operability" field. An IOD assignment does not necessarily need to be created.
Is an IOD Assignment Required?:	No
LCO entered:	No
Applicable LCO:	
Non-TS SSC Functionality Assessment:	Non-Functional
Literal 5:	NOTE: If a RAS is to be assigned to determine the answer to the next question, select "TBD" (to be determined) for the answer to the next question.
Does it impact a TS SSC?:	No
Literal 6:	The basis for establishing Non-TS SSC Functionality may be documented in the "Basis for Operability" field. A RAS assignment does not necessarily need to be created in these instances.
Is a RAS Assignment Needed?:	No
Literal 7:	If this Condition Report is addressing an SSC, document the qualification status of the SSC in the following field. Otherwise select N/A. NOTE: An SSC can be Operable or Functional and still not be Fully Qualified.
SSC Qualification Status:	N/A
Reportable condition?:	No
Text Question 3:	Reportability Comments:
Text Answer 3:	(None)
Can IOD be established?:	If this CR is associated with any system leakage, provide answers to the following:

Applicable to site: KEWA
Record #: CR523183
Revision Number: 0
Submitter: HOLSCHBACH, DARRYL M
Submitter Dept.: KEWA - Chemistry
Submitter Phone Number: 8146
Submitter Pager Number: 3050323
One-Line Description: Environmental Air Monitoring Sampler K-8 Loss of Power 8/7/2013
Description: Environmental Air Monitoring Sampler K-8 had reduced run time for the week of 8/6/2013 to 8/13/2013. The sampler, K-8, at the Tisch Mills Church was off from 8/7/13 02:17 am to 8/7/13 8:24 pm according to telemetry. A strong wind and thunderstorm went through the area on 8/7/13 in the morning hours.
The total run time recorded for the week was 152.07 hours.

Discovery Date: 8/7/2013
Discovery Time: 2:17:00
Method of Discovery: SELR (Self-revealing issue)
Literal 1: If this CR is associated with the BACC Program, please ensure that the CR Description contains sufficient information to ensure the ability to quickly locate the component, which will ensure ALARA.

Associated with Boric Acid?: No
Applicable to unit: None
Associated w/ Equipment Location?: No
System(s): 63-MET--METEOROLOGICAL/ENV

OP-AA-102 Review Req'd?:	Yes
Is a TS SSC Affected?:	No
TS SSC Operability Assessment:	N/A
Text Question 2:	Basis for operability:
Text Answer 2:	NON-FUNCTIONAL. K-44 is required per Table 2.2.1-A, Radiological Environmental Monitoring Program, as a sample location. K-44 is non-functional as a monitoring site in support of the REMM program.
	Per Notation b of Table 2.2.1-A, all deviations from the sampling schedule shall be documented, as required by REMM 2.4.1.c in the Annual Radiological Environmental Operating Report.
	Suitable alternative media and locations may be chosen for the particular pathway in question and appropriate substitutions made within 30 days in the REMM. The cause of the unavailability of samples for that pathway and the new location(s) for obtaining replacement samples will be identified in the Annual Radiological Environmental Operating Report.
	REMM requirements met with samples at alternate locations.
Question L:	Is an Operability Assessment req'd for an SSC, which is Functional for its TRM function, to demonstrate operability for its TS function?
Yes / No L:	No
Literal 4:	The basis for establishing IOD can be documented in the "Basis for Operability" field. An IOD assignment does not necessarily need to be created.
Is an IOD Assignment Required?:	No
LCO entered:	No
Applicable LCO:	
Non-TS SSC Functionality Assessment.: Non-Functional	
Literal 5:	NOTE: If a RAS is to be assigned to determine the answer to the next question, select "TBD" (to be determined) for the answer to the next question.
Does it impact a TS SSC?:	No
Literal 6:	The basis for establishing Non-TS SSC Functionality may be documented in the "Basis for Operability" field. A RAS assignment does not necessarily need to be created in these instances.
Is a RAS Assignment Needed?:	No
Literal 7:	If this Condition Report is addressing an SSC, document the qualification status of the SSC in the following field. Otherwise select N/A. NOTE: An SSC can be Operable or Functional and still not be Fully Qualified.
SSC Qualification Status:	N/A

Reportable condition?: No
