NRC Seeks Public Comment on Environmental Review Topics for North Anna Subsequent License Renewal

Nuclear Regulatory Commission staff is seeking public views regarding environmental issues the agency should consider in reviewing Virginia Electric and Power Co.'s (Dominion) application for an additional 20 years of operation for North Anna Power Station Units 1 and 2.

NRC staff will consider written comments on environmental topics until Nov. 23, following the publication of a [notice](#) in the *Federal Register*. Include Docket ID NRC-2020-0201 with the submitted comment, via the [regulations.gov](#) website or via mail to Office of Administration, Mail Stop TWFN 7 A60M, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001.

A [webinar](#) will be held Wednesday, Nov. 4, from 1-3 p.m., during which staff will discuss the environmental review process and take comments. Registration requests or requests to present oral comments should be submitted to NRC Project Manager Tam Tran by e-mail at tam.tran@nrc.gov by Nov. 2.

Dominion submitted the subsequent license renewal application on Aug. 24 for the North Anna reactors, located approximately 40 miles northwest of Richmond, Va. The [subsequent license renewal process](#) determines whether an operating reactor can extend its license for an additional 20 years to its renewed 60-year license (initial license renewals add 20 years to a reactor's original 40-year license). The [application](#), without proprietary details, is available on the NRC website. In addition, an electronic copy of the application and the related environmental report is available for public inspection at the Louisa County Library, 881 Davis Highway in Mineral, Va.
